2014 Revised Digital and 3D Program  
PGY2 General Surgery Residents

This is a refresher course in clinical anatomy for General Surgery residents. Based on feedback from residents and faculty, we are attempting a transition from cadaver based teaching to a 3D/multimedia-based course. This revised program seeks to build upon your knowledge of basic anatomy and with the help of 3D digital media and faculty tutors, to actively apply this understanding to surgical procedures, both open and laparoscopic. We hope you can then take the resources made available in these sessions and continue to expand your knowledge and better appreciate the core anatomical principles behind operations in the vast field of General SURGERY.

### COURSE DATE/TIME & OUTLINE
