10th Annual Spine Course
2015

Eric Massicotte MD, MSc, FRCSC
Course Chairman
Associate Professor University of Toronto
Staff Neurosurgeon, Spine Fellowship Coordinator
Director of Undergraduate Education for Neurosurgery
This course aims to create a relaxed environment promoting learning of surgical spinal anatomy, approaches and instrumentation.

All levels of the spine are covered over this three day course. Challenging residents from both orthopedic and neurosurgery training programs from across Canada. The goal is to increase their comfort level with simple and complex spinal pathologies. This cadaver based course allows sufficient time for the participants to reach their individualized objectives.

The majority of the time is spent with the cadavers with a maximum of 4 participants at each station. Lectures and presentation supplement the experience. This event also allows for exposure to multiple implant companies simultaneously.

The instrumentation available allows for all of the latest techniques to be demonstrated by the faculty from the University of Toronto Spine Program.

The Mount Sinai Hospital Surgical Skills Centre located on University Avenue offers the ultimate setting for this Cadaver based course.
